

Kemal Ozturk

SOFTWARE ENGINEER · PRODUCT, PLATFORM & TECHNICAL LEADERSHIP

Wheeling, IL · 97kemalozturk@gmail.com · kozturk.com · linkedin.com/in/ozturkkl · github.com/ozturkkl

PROFESSIONAL SUMMARY

Software engineer with 7 years of experience leading complex products from architecture and RFC through implementation, staged rollout, and production operations. Trusted as a technical DRI for cross-functional initiatives spanning frontend, APIs, platform services, security, and reliability. Known for turning ambiguous requirements into durable systems and delivering high-quality user outcomes.

TECHNICAL SKILLS

Core: TypeScript, JavaScript, React, Redux/Redux-Saga, Node.js, HTML, CSS/SCSS

Media & real time: WebRTC, Daily, MediaRecorder, WebCodecs, Web Workers, progressive upload and recovery, Electron

Systems & platform: Temporal, REST APIs, GCP, AWS, Firebase, Sentry, Retool, Nx, Turborepo, Vite, GitHub CI

Additional: Rust, Tokio, Poem/OpenAPI, Svelte, Python, C, C++, Nix/NixOS, AI-assisted development with Cursor, Claude Code, Zed, Microsoft Co-Pilot, and OpenAI Codex

PROFESSIONAL EXPERIENCE

Software Engineer

June 2023 – Present

Descript

- Led architecture and delivery of Scheduled Rooms and hostless recording across Drive, Rooms, APIs, and the recording stack; took invite management and scheduling from RFC through guarded releases to 100% rollout, reaching 500+ weekly creations, over 50% conversion, and roughly 25% of Rooms recordings.
- Designed room-to-project mapping and invite-scoped authorization, including delegate tokens, project permissions, failure modes, and migration plans; coordinated engineering review and phased rollouts to reduce risk during the SquadCast sunset.
- As an original author of Descript's Web Recorder platform, built the TypeScript engine, Recorder class, and Redux-Saga orchestration powering multi-track audio, 4K/30 FPS video, and screen capture across Editor, Media Library, Quick Recorder, and Rooms.
- Built a segmented upload manager with Web Worker offloading, progress events, smart timeouts and retries, duplicate-upload protection, and recovery handoff; enabled playback of in-progress recordings as chunks uploaded.
- Shipped script-state visualization, cross-surface cancel/restart, and pre-roll/live playback to GA; improved A/V synchronization from approximately 700 ms to 50 ms while eliminating lifecycle races, stuck workflows, and lingering media references.
- Owned high-severity recording reliability and on-call work across web and desktop, hardening data-loss recovery, device failures, authorization and rate-limit paths, memory telemetry, production deploy guards, and Support diagnostics.

Software Engineer
SquadCast

January 2022 – August 2023

- Built and maintained a browser-based remote recording product using Angular, TypeScript, Next.js, Firebase, and GCP, contributing to the recording engine, notifications, account lifecycle, integrations, onboarding, scheduling, and authentication.
- Led Canvas and SquadShots releases and introduced dark mode, mobile-first responsive design, accessibility improvements, and reusable UI components.
- Created Nx executors and generators that reduced feature scaffolding from 30 minutes to 5; profiled and fixed CPU usage and memory leaks across Studio, Chat, Dashboard, and audio metering.

Software Engineer
Peel9

August 2019 – September 2021

- Delivered Node.js, Express, and Handlebars features for records management and analytics used by 10+ police departments, including approval workflows, crash diagrams, modular forms, and account recovery.
- Led code reviews, maintained the GitHub repository, mentored junior engineers, and built a Leaflet plugin for dynamic crash-map markers.

SELECTED PROJECTS

Framework Control

2026 – Present

- Built a cross-platform Framework laptop control surface with a Rust service (Tokio, Poem, OpenAPI) and Svelte/Vite UI for live telemetry, fan curves, battery charging, and AMD power controls.
- Shipped Windows MSI and Linux systemd/udev support plus AUR, nixpkgs, and NixOS packaging; solo-maintained project reached 220+ GitHub stars and 7 forks.

Cihan Radyo

Volunteer · Ongoing

- Built and maintains a Svelte/TypeScript progressive web app for streaming radio stations and podcasts across desktop and mobile, with responsive playback, installability, and offline caching.
- Serves approximately 1.4K daily unique visitors and handles 334K daily requests through Cloudflare, delivering 20 GB per day with 61% cached.

EDUCATION

Bachelor of Science, Information Technology
University of Cincinnati

2021 · GPA 3.97/4.0

Coursework toward a Bachelor of Science in Computer Science
Ankara University

2016 – 2018 · GPA 3.83/4.0
